

Air Quality Forecast and Dispersion Outlook of Allegheny County, Pennsylvania for 10/21/2021

Air Quality Forecast: This is the daily forecasted Air Quality Index (AQI) for each area provided by the PA Department of Environmental Protection. The AQI is based on PM2.5 or Ozone, whichever is forecasted to be higher.

Forecast Period	Pittsburgh Area	Liberty-Clairton Area
Today Thursday 10/21/21	PM2.5 Good 44 AQI	PM2.5 Moderate 60 AQI
Tomorrow Friday 10/22/21	PM2.5 Good 40 AQI	PM2.5 Good 47 AQI

Today's Forecast: PM2.5 will start Thursday elevated, then gusty southwest winds by afternoon will keep the PM2.5 average from rising into moderate. Showers and a thunderstorm are also likely late in the day Thursday and Thursday evening as a cold front moves into Pennsylvania, further hampering PM2.5 formation.

See Page 2 for the Air Quality Index guide

ACHD Air Dispersion 36-Hour Forecast: This is the dispersion forecast for Allegheny County starting from this morning through tomorrow afternoon. The atmospheric dispersion index is a rating of the atmosphere's ability to transport pollution away from its source and is based on emissions and weather. Better atmospheric dispersion can improve air quality.

Forecast Period		Atmospheric Dispersion Index	Surface Inversion Strength	Wind (dir, mph)
Today	 Morning	Generally Good – 42	Moderate	S 6 to SW 7-11 Gust 22-23
	Afternoon	Good – 80	--	SW 10-13 Gust 21-26
Tonight	 Evening	Fair – 32	--	WSW 10 to W 8
	Overnight	Generally Poor – 16	--	W 6-8
Tomorrow	 Morning	Fair – 22	None	W 6
	Afternoon	Poor – 10	--	W 5

See page 2 for the Atmospheric Dispersion Index guide and the daily Surface Temperature Inversion Report.

ACHD Remarks: Chance of rain today and tomorrow.

Guide to the Air Quality Index (AQI)

Color	Description	Meaning	AQI
Red	Unhealthy	Everyone should limit exertion outdoors.	151 - 200
Orange	Unhealthy for Sensitive Groups	Sensitive people should limit exertion outdoors.	101 - 150
Yellow	Moderate	Extremely sensitive people may wish to limit outdoor exertion.	51 - 100
Green	Good	No health impacts are expected in this range.	0 - 50

Guide to the Atmospheric Dispersion Index

Very Poor	Poor	Generally Poor	Fair	Generally Good	Good	Very Good
1 - 6	7 - 12	13 - 20	21 - 40	41 - 60	61 - 100	> 100

ACHD Surface Temperature Inversion Report:

This is the 7 AM surface-based temperature inversion report for Allegheny County.

This morning's surface inversion of **4.2°C** with a depth of **298 m** is estimated to break at **10:45 AM**. This surface inversion can be characterized as: None / Slight / Weak / **Moderate** / Strong.

No upper inversion starting below ~1000 m is reported.

What does the Surface Temperature Inversion Report mean?

A surface temperature inversion is a weather pattern that stops mixing of the air near the ground, and pollution released into the air tends to remain at higher concentrations.

Surface temperature inversion conditions include how strong the surface inversion is (in °C), how high the inversion is above the surface (in meters), and when the inversion is expected to break (in Eastern Standard Time). Also included is whether an upper-level inversion or inversions exist, starting at about 1,000 meters.

Surface Temperature Inversion Characterization

- 0-0.9 C°: Slight
- 1-2.9 C°: Weak
- 3-4.9 C°: Moderate
- ≥5 C°: Strong
