Air Quality Forecast and Dispersion Outlook of Allegheny County, Pennsylvania for 1/6/2022

Air Quality Forecast: This is the daily forecasted Air Quality Index (AQI) for each area provided by the PA Department of Environmental Protection. The AQI is based on PM2.5 or Ozone, whichever is forecasted to be higher.

| Forecast Period | Pittsburgh Area | Liberty-Clairton Area | |
|------------------------------|--------------------------------|--------------------------------|--|
| Today Thursday 1/6/22 | PM2.5 Good 38 AQI | PM2.5 Good 39 AQI | |
| Tomorrow Friday 1/7/22 | PM2.5 Good 36 AQI | PM2.5 Good 36 AQI | |

Today's Forecast: Any morning sunshine will give way to clouds Thursday with snow arriving during the afternoon as low pressure moves out of the southeastern U.S. A decent amount of surface mixing will keep PM2.5 concentrations down in the good range. Snow will end later Thursday night, but not before depositing an inch or two.

See Page 2 for the Air Quality Index guide

Data provided by the PA Department of Environmental Protection

ACHD Air Dispersion 36-Hour Forecast: This is the dispersion forecast for Allegheny County starting from this morning through tomorrow afternoon. The atmospheric dispersion index is a rating of the atmosphere's ability to transport pollution away from its source and is based on emissions and weather. Better atmospheric dispersion can improve air quality.

| Forecast Period | | Atmospheric Dispersion Index | Surface Inversion Strength | Wind (dir, mph) |
|-----------------|-----------|---------------------------------|----------------------------|--------------------|
| | Morning | Good – 61 | None | W 7-9 |
| Today | Afternoon | Generally Good – 55 | | W 3-7 |
| Tonight | Evening | Poor – 11 | | W 2 to NW 6 |
| Tonight | Overnight | Generally Poor – 20 | | WNW 6 to W 7-9 |
| , 1 , | Morning | Good – 70 | None | W 9-13 Gust 20 |
| Tomorrow | Afternoon | Good – 93 | | W 9-13 Gust 21 |

See page 2 for the Atmospheric Dispersion Index guide and the daily Surface Temperature Inversion Report.

ACHD Remarks: Snow this evening into overnight.

| Guide to the Air Quality Index (AQI) | | | | | |
|--------------------------------------|--------------------------------|--|-----------|--|--|
| Color | Description | Meaning | | | |
| Red | Unhealthy | Everyone should limit exertion outdoors. | 151 - 200 | | |
| Orange | Unhealthy for Sensitive Groups | Sensitive people should limit exertion outdoors. | 101 - 150 | | |
| Yellow | Moderate | Extremely sensitive people may wish to limit outdoor exertion. | 51 - 100 | | |
| Green | Good | No health impacts are expected in this range. | 0 - 50 | | |

| Guide to the Atmospheric Dispersion Index | | | | | | |
|---|--------|----------------|---------|----------------|----------|-----------|
| Very Poor | Poor | Generally Poor | Fair | Generally Good | Good | Very Good |
| 1 - 6 | 7 - 12 | 13 - 20 | 21 - 40 | 41 - 60 | 61 - 100 | > 100 |

ACHD Surface Temperature Inversion Report:

This is the 7 AM surface-based temperature inversion report for Allegheny County.

This morning's surface inversion of <u>-- °C</u> with a depth of <u>-- m</u> is estimated to break at <u>--</u>. This surface inversion can be characterized as: <u>None</u>/ Slight / Weak / Moderate / Strong.

No upper inversion starting below ~1000 m is reported.

What does the Surface Temperature Inversion Report mean?

A surface temperature inversion is a weather pattern that stops mixing of the air near the ground, and pollution released into the air tends to remain at higher concentrations.

Surface temperature inversion conditions include how strong the surface inversion is (in °C), how high the inversion is above the surface (in meters), and when the inversion is expected to break (in Eastern Standard Time). Also included is whether an upper-level inversion or inversions exist, starting at about 1,000 meters.

<u>Surface Temperature Inversion Characterization</u>

0-0.9 C°: Slight 1-2.9 C°: Weak 3-4.9 C°: Moderate ≥5 C°: Strong
