

# Air Quality Forecast and Dispersion Outlook of Allegheny County, Pennsylvania for 8/2/22

**Air Quality Forecast:** This is the daily forecasted Air Quality Index (AQI) for each area provided by the PA Department of Environmental Protection. The AQI is based on PM2.5 or Ozone, whichever is forecasted to be higher.

| Forecast Period                        | Pittsburgh Area                    | Liberty-Clairton Area              |
|--|------------------------------------|------------------------------------|
| <b>Today</b><br>Tuesday<br>8/2/22      | Ozone<br><b>Good</b><br>45 AQI     | PM2.5<br><b>Good</b><br>35 AQI     |
| <b>Tomorrow</b><br>Wednesday<br>8/3/22 | Ozone<br><b>Moderate</b><br>67 AQI | PM2.5<br><b>Moderate</b><br>58 AQI |

### Today's Forecast:

**Breezy with times of clouds and sunshine Tuesday. A shower or thundershower cannot be ruled out, but most locations remain dry. Strong surface mixing and dispersion along with lower humidity will mean air quality will be in the good range.**

See Page 2 for the Air Quality Index guide

**ACHD Air Dispersion 36-Hour Forecast:** This is the dispersion forecast for Allegheny County starting from this morning through tomorrow afternoon. The atmospheric dispersion index is a rating of the atmosphere's ability to transport pollution away from its source and is based on emissions and weather. Better atmospheric dispersion can improve air quality.

| Forecast Period |   | Atmospheric Dispersion Index | Surface Inversion Strength | Wind (dir mph) |
|-----------------|---|------------------------------|----------------------------|----------------|
| <b>Today</b>    |  Morning | Good – 88                    | None                       | NW 8           |
|                 | Afternoon   | Very Good – 101              | --                         | NW 8           |
| <b>Tonight</b>  |  Evening | Poor – 8                     | --                         | NW 7           |
|                 | Overnight   | Very Poor – 1                | --                         | NNE 1          |
| <b>Tomorrow</b> |  Morning | Fair – 22                    | Strong                     | SE 1           |
|                 | Afternoon   | Good – 64                    | --                         | SW 9           |

See page 2 for the Atmospheric Dispersion Index guide and the daily Surface Temperature Inversion Report.

**ACHD Remarks:** GFS model sounding forecast for PIT tomorrow morning (Wednesday) shows a strong inversion that could contribute to poor air quality overnight and into the morning. Conditions should improve by ~10am.

## Guide to the Air Quality Index (AQI)

| Color  | Description                    | Meaning  | AQI       |
|--------|--------------------------------|--|-----------|
| Red    | Unhealthy                      | Everyone should limit exertion outdoors.                       | 151 - 200 |
| Orange | Unhealthy for Sensitive Groups | Sensitive people should limit exertion outdoors.               | 101 - 150 |
| Yellow | Moderate                       | Extremely sensitive people may wish to limit outdoor exertion. | 51 - 100  |
| Green  | Good                           | No health impacts are expected in this range.                  | 0 - 50    |

## Guide to the Atmospheric Dispersion Index

| Very Poor | Poor   | Generally Poor | Fair    | Generally Good | Good     | Very Good |
|-----------|--------|----------------|---------|----------------|----------|-----------|
| 1 - 6     | 7 - 12 | 13 - 20        | 21 - 40 | 41 - 60        | 61 - 100 | > 100     |

### ACHD Surface Temperature Inversion Report:

*This is the 7 AM surface-based temperature inversion report for Allegheny County.*

This morning's inversion of 1° and a depth of 107 m starts ~40 m above the surface and is estimated to have broken at 08:00. This inversion can be characterized as: None / Slight / **Weak** / Moderate / Strong.

There is no upper level inversion reported.

### What does the Surface Temperature Inversion Report mean?

A surface temperature inversion is a weather pattern that stops mixing of the air near the ground, and pollution released into the air tends to remain at higher concentrations.

Surface temperature inversion conditions include how strong the surface inversion is (in °C), how high the inversion is above the surface (in meters), and when the inversion is expected to break (in Eastern Standard Time). Also included is whether an upper-level inversion or inversions exist, starting at about 1,000 meters.

#### Surface Temperature Inversion Characterization

- 0-0.9 C°: Slight
- 1-2.9 C°: Weak
- 3-4.9 C°: Moderate
- ≥5 C°: Strong
