

Air Quality Forecast and Dispersion Outlook of Allegheny County, Pennsylvania for 1/11/23

Air Quality Forecast: This is the daily forecasted Air Quality Index (AQI) for each area provided by the PA Department of Environmental Protection. The AQI is based on PM2.5 or Ozone, whichever is forecasted to be higher.

Forecast Period	Pittsburgh Area	Liberty-Clairton Area
Today Wednesday 1/11/23	PM2.5 Moderate 75 AQI	PM2.5 Moderate 85 AQI
Tomorrow Thursday 1/12/23	PM2.5 Good 40 AQI	PM2.5 Good 38 AQI

Today's Forecast:

Poor dispersion Wednesday morning along with very light southeast winds will elevate PM2.5, and concentrations will be highest prior to 11 a.m. Air quality will improve Wednesday afternoon as the southeasterly flow increases and the inversion breaks. Still, concentrations on average will end up well into the moderate range.

See Page 2 for the Air Quality Index guide

ACHD Air Dispersion 36-Hour Forecast: This is the dispersion forecast for Allegheny County starting from this morning through tomorrow afternoon. The atmospheric dispersion index is a rating of the atmosphere's ability to transport pollution away from its source and is based on emissions and weather. Better atmospheric dispersion can improve air quality.

Forecast Period		Atmospheric Dispersion Index	Surface Inversion Strength	Wind (dir mph)
Today	 Morning	5 – Very Poor	Strong	SE <5
	Afternoon	10 – Poor	--	S-SE 5
Tonight	 Evening	5 – Very Poor	--	SE 5-10
	Overnight	4 – Very Poor	Weak	SE <5
Tomorrow	 Morning	9 – Poor	Moderate	SE <5
	Afternoon	17 – Generally Poor	--	SE 5-10

See page 2 for the Atmospheric Dispersion Index guide and the daily Surface Temperature Inversion Report.

ACHD Remarks:

Data provided by the National Weather Service (NWS) [Fire Weather Planning Forecast](#) and [PIT NWS Products](#)

Guide to the Air Quality Index (AQI)

Color	Description	Meaning	AQI
Red	Unhealthy	Everyone should limit exertion outdoors.	151 - 200
Orange	Unhealthy for Sensitive Groups	Sensitive people should limit exertion outdoors.	101 - 150
Yellow	Moderate	Extremely sensitive people may wish to limit outdoor exertion.	51 - 100
Green	Good	No health impacts are expected in this range.	0 - 50

Guide to the Atmospheric Dispersion Index

Very Poor	Poor	Generally Poor	Fair	Generally Good	Good	Very Good
1 - 6	7 - 12	13 - 20	21 - 40	41 - 60	61 - 100	> 100

ACHD Surface Temperature Inversion Report:

This is the 7 AM surface-based temperature inversion report for Allegheny County.

This morning's inversion of 5.3°C with a depth of 151 m is estimated to break at ~12:00 pm.

This inversion can be characterized as: None / Slight / Weak / Moderate / **Strong**.

There is an inversion above ~1000 meters reported.

What does the Surface Temperature Inversion Report mean?

A surface temperature inversion is a weather pattern that stops mixing of the air near the ground, and pollution released into the air tends to remain at higher concentrations.

Surface temperature inversion conditions include how strong the surface inversion is (in °C), how high the inversion is above the surface (in meters), and when the inversion is expected to break (in Eastern Standard Time). Also included is whether an upper-level inversion or inversions exist, starting at about 1,000 meters.

Surface Temperature Inversion Characterization

- 0-0.9 C°: Slight
- 1-2.9 C°: Weak
- 3-4.9 C°: Moderate
- ≥5 C°: Strong
