

Air Quality Forecast and Dispersion Outlook of Allegheny County, Pennsylvania for 9/1/23

Air Quality Forecast: This is the daily forecasted Air Quality Index (AQI) for each area provided by the PA Department of Environmental Protection. The AQI is based on PM2.5 or Ozone, whichever is forecasted to be higher.

Forecast Period	Pittsburgh Area	Liberty-Clairton Area
Today Friday 9/1/23	PM2.5 Good 50 AQI	PM2.5 Good 39 AQI
Tomorrow Saturday 9/2/23	Ozone Moderate 60 AQI	PM2.5 Moderate 56 AQI

Today's Forecast:

Mostly sunny Friday with another nice afternoon. A moderate morning inversion may cause PM2.5 to be a little higher early, then enough afternoon dispersion occurs to where average concentrations of this pollutant end up in the high end of the good range. Ozone maximums may rise a little, but remaining just below moderate. A strong ridge of high pressure will exert its influence over the region over the Labor Day holiday weekend. Limited mixing, sunshine, and heat will contribute to moderate air quality.

See Page 2 for the Air Quality Index guide

ACHD Air Dispersion 36-Hour Forecast: This is the dispersion forecast for Allegheny County starting from this morning through tomorrow afternoon. The atmospheric dispersion index is a rating of the atmosphere's ability to transport pollution away from its source and is based on emissions and weather. Better atmospheric dispersion can improve air quality.

Forecast Period		Atmospheric Dispersion Index	Surface Inversion Strength	Wind (dir mph)
Today	 Morning	17 – Generally Poor	Moderate	E <5-10
	Afternoon	33 – Fair	--	E 5
Tonight	 Evening	3 – Very Poor	Weak	E-SE <5
	Overnight	4 – Very Poor	Strong	SE <5
Tomorrow	 Morning	25 – Fair	Moderate	S-SW <5-10
	Afternoon	69 – Good	--	W-SW 5-10

See page 2 for the Atmospheric Dispersion Index guide and the daily Surface Temperature Inversion Report.

ACHD Remarks:

Data provided by the National Weather Service (NWS) [Fire Weather Planning Forecast](#) and [PIT NWS Products](#)

Guide to the Air Quality Index (AQI)

Color	Description	Meaning	AQI
Red	Unhealthy	Everyone should limit exertion outdoors.	151 - 200
Orange	Unhealthy for Sensitive Groups	Sensitive people should limit exertion outdoors.	101 - 150
Yellow	Moderate	Extremely sensitive people may wish to limit outdoor exertion.	51 - 100
Green	Good	No health impacts are expected in this range.	0 - 50

Guide to the Atmospheric Dispersion Index

Very Poor	Poor	Generally Poor	Fair	Generally Good	Good	Very Good
1 - 6	7 - 12	13 - 20	21 - 40	41 - 60	61 - 100	> 100

ACHD Surface Temperature Inversion Report:

This is the 7 AM surface-based temperature inversion report for Allegheny County.

This morning's inversion of **3.6°C** with a depth of **271 m** is estimated to break at **9:30 AM**.

This inversion can be characterized as: None / Slight / Weak / **Moderate** / Strong.

There is an inversion above ~1000 meters reported.

What does the Surface Temperature Inversion Report mean?

A surface temperature inversion is a weather pattern that stops mixing of the air near the ground, and pollution released into the air tends to remain at higher concentrations.

Surface temperature inversion conditions include how strong the surface inversion is (in °C), how high the inversion is above the surface (in meters), and when the inversion is expected to break (in Eastern Standard Time). Also included is whether an upper-level inversion or inversions exist, starting at about 1,000 meters.

Surface Temperature Inversion Characterization

0-0.9 C°: Slight

1-2.9 C°: Weak

3-4.9 C°: Moderate

≥5 C°: Strong
